

FY2024 Second Quarter Business Summary

(Year Ending March 31, 2025)

Contents

| | | | |
|---------------------------------------|-----|---------------------------------------|-------|
| Overview | 2-3 | Management Strategy: | |
| Sales and Income | 4-5 | Three Main Areas of Business | 13 |
| Pharmaceutical Sales | 6-7 | Roadmap for Innovation | 14 |
| Sales Distribution by Launch Year | 8 | Generic Drugs | 15 |
| Balance Sheet | 9 | Diagnostics | 16 |
| Cash Flow | 10 | New Drug Development: Pipeline | 17 |
| Expenditure and Per Share Information | 11 | – In-house Development ①② | 18-19 |
| Indexes | 12 | – In-licensing Pipeline | 20 |
| | | Multifaceted Development of Alkalizer | 21 |
| | | Overseas Business | 22 |

Sales

Consolidated net sales: Up 5.3 % YOY, 49.6% progress vs full-year sales forecast

- Sales in the pharmaceutical business were up thanks to growth in sales of generics and DropScreen, an allergy screening kit and reagent. Progress vs full-year sales forecast is near on track.

1. Pharmaceuticals: Sales were up 2.5% YOY, 51.3% progress vs full-year sales forecast

Factors contributing to sales growth:

- Steady sales of generics that we are focusing on expansion of sales.
- Repricing of unprofitable drugs and impact of newly launched products.

Factors contributing to decrease in sales:

- Impact of NHI price revisions (around negative 3 %) implemented in April.
- Termination of unprofitable drugs handled by the Group and out-licensed products.

2. Diagnostics: Sales were up 22.5% YOY, 42.4% progress vs full-year sales forecast

- Continuous solid growth of DropScreen, reaching cumulative installation of approx. 1,300 units in Japan as of end September.
- Sales and profit performance is on track for the full-year forecast as it tends to weight heavier in the 2nd half of the FY during hay fever season.

Profit

Operating profit: ¥76 million (returned to profitability)

- Despite of the impact of the NHI price revisions, growth in sales of DropScreen and pharmaceuticals as well as the boost from the decrease in the cost rate thanks to improvement in sales mix made significant contributions.
- Returned to profitability with ¥76 million compared to the operating loss recorded same period of last year, after absorbing the increased SG&A expenses for developing generics and new drugs.

Ordinary loss: ¥ 62 million, Net loss: ¥44 million

- Ordinary loss was ¥ 62 million and loss attributable to owners of parent was ¥ 44 million, mainly because of the foreign currency-denominated assets and liabilities held by the Group recorded a loss of ¥78 million due to the appreciation of the yen.

Recent Topics

New Drug Pipeline

- NC-2800 : Finished phase I and preparing for initiating phase IIa trials.
- DFP-17729: Finished phase I/II and consultations are underway with PMDA for preparing the next phase.
- DFP-14323 : Started phase III trials in February 2024 and steadily increasing registration of patients.

Management Strategy: Three Main Areas of Business

Since 2000, the Nippon Chemiphar Group has been working to attain three principal goals. In order to advance the themes of those goals, the Group has determined three main areas of business: generics, diagnostics, and new drugs including alkalizing agents. By expanding these business areas overseas, the Group will maximize its corporate value and achieve sustainable growth.

Generics

Develop a distinctive generic drug business that pursues quality

Diagnostics

Expand business by developing innovative products based on core technologies cultivated in the field of allergy

New Drugs

Continuously develop and monetize groundbreaking new drugs based on our proprietary technologies and know-how, including alkalization therapy

Overseas business development

Realize a global presence by aggressively developing our three areas of business abroad

Roadmap for Innovation

Many projects are underway simultaneously for developing innovative drugs and products. Our roadmap will guide the way for a solid growth and bright future for Nippon Chemipharm Group.

| Area | Activity | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | |
|-------------------|--|--|--|--|---|-------------------|--|------|--|-------------------------------|-------------------------------|--|
| Diagnostics | Expand sales of DropScreen | Expand domestic market / Targeting 2,000 installations in FY2025 / Aim to achieve continuous business expansion by creating new series of measuring reagents | | | | | | | | | | |
| | | | | | | | | | Start and gradually expand exports | | | |
| | | Create new version of equipment for domestic market and additional reagents for overseas | | | | | | | | | | |
| Alkalizer | DFP-17729: Finished phase I/II | Phase I/II for pancreatic cancer | | Evaluation and preparation | | | Move to next phase | | | Application, approval, launch | | |
| | Consider expanding additional chronic kidney disease-related indications | Clinical data analysis/ addition of basic data | | | Clinical trials starting from 2024, seek possibilities for additional indications | | | | | | Application, approval, launch | |
| Drug discovery | NC-2800: Conduct phase IIa trials; out-licensing | Agreements | In accordance with AMED's CiCLE program, conducted phase I | | | Conduct phase IIa | | | Licensee company will conduct phase IIb/III trials | | | |
| | NC-2500: Out licencing activities for new indications | | | Undergoing development for approval in China by out licensing | | | | | | | | |
| | NC-2600: Out licencing activities for new indications | Licencing out for chronic cough | | | Licensee company will conduct clinical trials | | | | | | | |
| | NC-2700: Continue out licencing | | | | | | Continue licencing out activities for early monetization | | | | | |
| | DFP-14323: Began phase III | Finished phase II for lung cancer | | | Began Phase III | | | | | | Application, approval, launch | |
| Overseas business | From export to local development and production | ASEAN, China, Middle East and Africa: | | Current: Selling 5 products in 4 countries in FY2021 Target: To sell 14 products in 5 countries in FY2026 | | | | | Expand number of countries and products | | | |

A new production facility at Tsukuba Factory was completed for ensuring stable supply of high-quality pharmaceuticals. To fulfill the fundamental responsibility as a manufacturer, ceaseless efforts are made to strengthen our quality assurance system.

> Completion of new facility in Building No.3 of Nihon Pharmaceutical Industry's Tsukuba Factory

- Implementation of the new facility on the 2nd floor of Building No.3. was completed in August 2024 to prepare for manufacturing future generic products, as well as transferring the current production at Building No.1.
- First shipment is scheduled during FY2025 after validation and making prototypes.

Building No.3, Tsukuba Factory

> Strengthening quality assurance systems

- Nippon Chemiphar Group Quality Assurance Management Department will act as a hub for the whole Group to maintain ceaseless efforts for a stronger quality assurance system.
- To ensure quality control and production management of the highest standards, we are constantly reviewing our procedures in accordance with both GQP and GMP.
- Regular audits are conducted for Group manufacturing sites as well as external contractors and raw material manufacturers to confirm that production management and quality control are being performed in keeping with the principles of GMP.

Cumulative number of DropScreen installed in Japan reached approx.1,300 units. While aiming for 2,000 units by FY2025, we are proceeding development of the next generation model as well as expansion to the overseas market.

> DropScreen business

Features

- Highly valued by medical professionals and patients due to its capability to measure 41 items from a single drop of blood without the need for a syringe.
- Creating a new market of POCT(Point of care testing *)

Cumulative number of units installed

- End of September 2024: approx. 1,300 units
→ Aim for 2,000 units by FY2025

Next steps

- Development of the kit and reagent of the next generation model
- Launch in overseas market

DropScreen
A-1

> Sales of Diagnostics business

*POCT: Point-of-care tests are medical tests that can be performed at medical institutions instead of being outsourced

New Drug Development: Pipeline

NC-2800 was approved by AMED for continuing clinical trials as it achieved the set milestones including the phase I results. Currently preparing for initiating phase IIa.
DFP-14323 started phase III trial in February 2024.

In-house drug development
 Development through alliances
 Development by licensees
 > As of October 2024

| Item | Mechanism of Action (Target) | Pre-clinical | Phase I | Phase II | Phase III |
|-----------|---|--------------|---------|----------|-----------|
| NC-2500 | XOR inhibitor (Hyperuricemia, gout) | | | | |
| NC-2600 | P2X4 receptor antagonist (Neuropathic pain, chronic cough) | | | | |
| NC-2700 | URAT1 inhibitor (Hyperuricemia, gout) | | | | |
| NC-2800 | δ opioid receptor agonist (Depression/Anxiety) | | | | |
| DFP-17729 | Cancer microenvironment improving agent(Pancreatic cancer) | | | | |
| DFP-14323 | Anti cancer agent (Non-small cell lung cancer) | | | | |
| Calvan | $\alpha 1\beta 1$ blocker (Huntington's disease) | | | | |

Pipeline — In-house Development Pipeline①

NC-2500 (XOR inhibitor)

| Stage | Target | Originator | Licensee |
|--|---------------------|--|--|
| Finished phase I | Hyperuricemia, gout | Nippon Chemiphar | Nanjing Neiwa Faith Pharmaceutical Co., Ltd. |
| Feature | | Note | |
| <ul style="list-style-type: none">• Suppresses uric acid production by inhibiting XOR.• Phase I results showed its unique property to lower blood uric acid levels gradually, suggesting it may rectify acute attack of gout during the treatment | | <ul style="list-style-type: none">• We signed a licensing agreement with Nanjing Neiwa Faith for gout and hyperuricemia in 2023, and preparations are underway to conduct clinical trials in China.• Preliminary data indicates that NC-2500 is effective against neurodegenerative disorders. We are exploring the possibility of expanding the indication of NC-2500 to include such disorders. | |

NC-2600 (P2X4 receptor antagonist)

| Stage | Target | Originator | Joint developer |
|--|------------------------------------|--|-----------------|
| Finished phase I | Neuropathic pain and chronic cough | Joint research including Chemiphar | N.A. |
| Feature | | Note | |
| <ul style="list-style-type: none">• Has a unique mechanism of action that inhibits P2X4 receptors. | | <ul style="list-style-type: none">• In vivo tests have confirmed its effectiveness against chronic cough, and we are exploring the drug's potential as a therapeutic agent with a new mechanism without side effects such as loss of taste.• Conducting proactive out-licensing activities. | |

Pipeline — In-house Development Pipeline②

NC-2700 (URAT 1 inhibitor)

| Stage | Target | Originator | Joint developer |
|---|---------------------|---|-----------------|
| Finished pre-clinical | Hyperuricemia, gout | Three way joint research including Chemiphar | — |
| Feature | | Note | |
| <ul style="list-style-type: none"> Promotes the excretion of uric acid from the body by inhibiting the transporter URAT 1. | | In-vivo test have shown that it facilitates the amelioration of aciduria, thereby helping to prevent kidney damage and kidney stones, which are concerns in existing drugs. | |

NC-2800 (Delta opioid receptor agonist)

updates in red

| Stage | Target | Originator | Joint developer |
|---|------------------------|---|---------------------------|
| Finished phase I | Anxiety and depression | Four way joint research including Chemiphar | Sumitomo Pharma Co., Ltd. |
| Feature | | Note | |
| <ul style="list-style-type: none"> The drug targets δ opioid receptors, and data suggest it has fewer side effects such as dependence, tolerance, constipation, and respiratory depression than opioid μ receptor agonists like morphine, and strikes an excellent balance between safety and efficacy. | | <ul style="list-style-type: none"> AMED's CiCLE project selected it for public funding and support of the development. Finished phase I trial in FY2023 and was approved by AMED in October 2024 for continuing the project by achieving the set milestones including its results. Preparing for initiating phase IIa trial. | |

Pipeline — In-licensing Pipeline

DFP-17729 (Cancer microenvironment improving agent)

| Stage | Target | Originator | Developer |
|--|-------------------|---|-----------|
| Finished phase I/II | Pancreatic cancer | Delta-Fly Pharma, Inc. (DFP) | DFP |
| Feature | | Note | |
| • By alkalizing tumor microenvironments, DFP-17729 has been shown to suppress cancer cell activities and facilitate the efficacy of anticancer agents. | | • In 2020 we concluded a license agreement with DFP and acquired exclusive rights to market in Japan. • Phase I/II has now been completed and data analysis is underway for the next phase, and we expect to be able to submit for approval as a pancreatic cancer treatment around 2027. In the future, we will examine expanding its indication also to other types of cancer. | |

DFP-14323 (Anti-cancer agent)

| Stage | Target | Originator | Developer |
|---|----------------------------|---|-----------|
| Started phase III | Non-small cell lung cancer | Delta-Fly Pharma, Inc. (DFP) | DFP |
| Feature | | Note | |
| • Strengthens the immune response of cancer patients by binding to aminopeptidase N. In this way, the compound reduces the dose required of standard anticancer drugs, and enhances their efficacy without increasing the side effects. | | • In 2022, we concluded a license agreement with DFP and acquired exclusive rights to market in Japan. • Results of phase II trial was announced at the ASCO* in June, 2022 • Phase III trial began in February 2024. We expect to submit an application for approval by around 2029. | |

*American Society of Clinical Oncology

Multifaceted Development of Alkalizer

We are conducting multifaceted development using alkalization-related technologies and expertise that we cultivated over many years through activities associated with our urine alkalizer, Uralyt.

> Application of alkalization technologies

**To expand the usage
of our alkalization-related
technologies and expertise**

```

UHA Mikakuto.)

Overseas Business for Pharmaceutical Products

Expanded sales in overseas by launching a product in Vietnam and China. On top of Asia, expanding sales to the Middle East/Africa aiming for total 14 products in 5 countries by FY2026.

> Rebamipide Tablet for the Vietnamese market

- Local supply of Rebamipide Tablets 100mg, a treatment for gastritis and stomach ulcer manufactured by Nippon Chemiphar Vietnam Co.,Ltd, started in August, including a national medical university hospital representing Vietnam.
- It is the first product for the Group to be approved in Vietnam and has been granted 'Group 1,' which allows for sales at the highest drug price in the country.

> Celebrating the first shipment of Rebamipide in Vietnam

> Epinastine Tablets for the Chinese market

- Epinastine, a treatment for allergic diseases was the first generic manufactured in Japan that was approved for the Chinese market. In July, the first shipment of Epinastine Hydrochloride Tablets 20mg was sent to China.
- Aiming for expansion of sales volume in partnership with local companies.
